引文與參考文獻與文獻目錄

Citation-引文(註)

The *Journal of Abnormal Psychology* was the product of a great effervescence of thought at the turn of the 20th century. Its founding editor, Morton Prince, was an energetic physician specializing in what would come to be psychiatry. The scion of Boston's political elite, Prince lived up to this legacy by founding other long-lived institutions as well, including the American Psychopathological Association and the Harvard Psychological Clinic. For the journal, he wanted its pages to include "such subjects as hysteria, hallucinations, delusions, amnesias, abulias, aphasias, fixed ideas, obsessions, deliria, perversions, emotions and their influence, exaltations, depressions, habit neuroses and psychoses, phenomena of hypnosis, sleep, dreams, automatisms, alterations of personality, multiple personality (Prince's particular specialty), dissociation of consciousness, subconscious phenomena, relation of the mind to physiological processes, neurasthenic and psychasthenic states" (Allport, 1938). The first issue, published in April 1906, would include articles on compulsive behavior, hypnosis, sudden religious conversion, and a critique of a new treatment technique introduced by an Austrian physician, Sigmund Freud (which, the author indicated, was "often less necessary than one might think" [Putnam, 1906]).

Modeling What Matters to Gray Matter

If much of what is attractive about PPF with regards to psychology is not particularly novel, what does PPF add? One valuable feature is its potential to be neurally realized, not just in the midbrain and basal ganglia, but across cortex. The suggestion, supported by neuroanatomical observations, is that the whole brain deals in predictions and prediction errors as part of a generative model of the causes of our ongoing sensorium. That model, and the cortex itself, is hierarchical such that activity in each layer tries to predict the activity in the layer projecting to it (Friston, 2005). For example, hierarchical predictive coding models of vision reflect features of visual receptive fields, like end-stopping—that some cells respond more vigorously to short than long stimuli. Rajesh Rao and Dana Ballard (Rao & Ballard, 1999) showed that a hierarchical (three-layer) model tracking predictions and prediction errors about natural image inputs evinced end-stopping, carried by “cells” (nodes in the model) that signaled prediction errors.

II. METHODOLOGY

In this section, we give a high-level overview of the methodology we have used for this *post-hoc* self-assessment. The process is described in detail in Section III.

A. Z-Inspection[®] Process

We used a process to assess trustworthy AI in practice, called Z-Inspection[®] [5], which expands upon the “Framework for Trustworthy AI” as defined by the High Level Experts Groups set up by the European Commission [3]. The Z-Inspection[®] is a holistic process based on the method of evaluating new technologies according to which ethical issues must be discussed through the elaboration of sociotechnical scenarios. The Z-Inspection[®] process is depicted in Fig. 1, and it is composed of three main phases: 1) the Set Up Phase; 2) the Assess Phase; and 3) the Resolve Phase. The process has been successfully applied to both assess *post-hoc* [6] and *ex-ante* [7] trustworthiness of AI systems used in healthcare.

The image shows the 'EndNote 2025 - New Library' dialog box on a Mac. The window title is 'EndNote 2025 - New Library'. The main area is titled 'New Reference Library'. It features a 'Save As:' field containing 'My EndNote Library', a 'Tags:' field, and a location selector set to 'Desktop'. A sidebar on the left shows 'Favorites' (Applications, Documents, Desktop, Downloads) and 'Locations' (EndNote..., Network). A 'Tags' section at the bottom lists colors: 紅色, 橙色, 黃色, 綠色, 藍色. A 'Save as Package' checkbox is present with a descriptive text box. A 'Save' button is at the bottom right. Annotations in purple callouts provide instructions: '取新檔名' points to the 'Save As:' field; '選擇檔案存放位置 ※ 務必儲存在電腦本機端' points to the 'Desktop' location; '勾選後只會存成一個檔案 (.enlp) 若無勾選擇會存成兩檔案 (.enl 和 .data) , 方可與 Windows 通用。' points to the 'Save as Package' checkbox.

洞察核心要點(Key Takeaway)

- 歸納文獻核心要點，協助研究人員快速判斷相關性。
- 解析文獻重點概念，啟發研究人員研究靈感。

Key Takeaway

Landslides are significantly influenced by both climatic factors and human activities, with a notable increase in fatal landslides linked to construction, illegal mining, and hill cutting from 2004 to 2016.

Additional topics discussed in the document are:

- Impact of climate change on landslide frequency
- Human activities contributing to landslide risks
- Regional variations in landslide occurrences

Multi-Head_DNN-Based_Federated_Learning_for_RS.pdf

Received 14 June 2024, accepted 8 July 2024, date of publication 15 July 2024, date of current version 15 July 2024. This manuscript version is for review purposes only. Digital Object Identifier 10.1109/ACCESS.2024.3427694

RESEARCH ARTICLE

Multi-Head DNN-Based Federated Learning for RSRP Prediction in 6G Wireless Communication

MENGHAN YU^{ID}, XIONG XIONG, ZHEN LI, AND XU XIA^{ID}, (Members of IEEE)

6G Research Center, China Telecom Research Institute, Beijing 102209, China
Corresponding author: Menghan Yu (yumh1@chinatelecom.cn)

This work was supported by the 2020 National Key Research and Development Program “Special “6G Network Architecture and Key Technologies” under Grant 2020YFB1806700.

Key Takeaway

The proposed Multi head DNN based federated learning algorithm significantly enhances RSRP prediction performance while reducing communication overhead compared to the FedAVG algorithm in 6G networks.

Additional topics discussed in the document are:

- Federated Learning Frameworks
- AI Integration in Wireless Networks
- Challenges in RSRP Prediction

Totura-2019-Broad-spectrum-coronavirus-antivir.pdf

EXPERT OPINION ON DRUG DISCOVERY
2019, VOL. 14, NO. 4, 397-412
<https://doi.org/10.1080/17460441.2019.1581171>

REVIEW

Check for updates

Broad-spectrum coronavirus antiviral drug discovery

Allison L. Totura and Sina Bavari

Division of Molecular and Translational Sciences, United States Army Medical Research Institute of Infectious Diseases, Fort Detrick, MD, USA

ABSTRACT

Introduction: The highly pathogenic coronaviruses severe acute respiratory syndrome coronavirus (SARS-CoV) and Middle East respiratory syndrome coronavirus (MERS-CoV) are lethal zoonotic viruses that have emerged into human populations these past 15 years. These coronaviruses are associated with novel respiratory syndromes that spread from person-to-person via close contact, resulting in high morbidity and mortality caused by the progression to Acute Respiratory Distress Syndrome (ARDS).

Areas covered: The risks of re-emergence of SARS-CoV from bat reservoir hosts, the persistence of MERS-CoV circulation, and the potential for future emergence of novel coronaviruses indicate antiviral drug discovery will require activity against multiple coronaviruses. In this review, approaches that antagonize viral nonstructural proteins, neutralize structural proteins, or modulate essential host elements of viral infection with varying levels of efficacy in models of highly pathogenic coronavirus disease are discussed.

Expert opinion: Treatment of SARS and MERS in outbreak settings has focused on therapeutics with general antiviral activity and good safety profiles rather than efficacy data provided by cellular, rodent, or nonhuman primate models of highly pathogenic coronavirus infection. Based on lessons learned from SARS and MERS outbreaks, lack of drugs capable of pan-coronavirus antiviral activity increases the vulnerability of public health systems to a highly pathogenic coronavirus pandemic.

基于多头DNN的联邦学习在6G无线通信中进行RSRP

MENGHAN YU, XIONG XIONG, ZHEN LI, 和XU
6G研究中心, 中国电信研究院, 北京102209, 中国
通讯作者: Menghan Yu (yumh1@chinatelecom.com)
本研究得到了2020年国家重点研发计划“宽带通信与网络”
专项资助, 资助号2020YFB1806700。

摘要: 在无线通信领域, 准确的接收信号强度指示 (RSRP) 预测是改善用户体验和优化网络效率与可靠性的基础。随着人工智能 (AI) 技术与无线通信网络的深度融合, 联邦学习 (FL) 被视为在即将到来的6G网络中增强RSRP预测的可行方案。然而, 在实践中, 用户设备 (UE) 环境的异质性以及模型交互效率低下, 导致FL中的模型性能不佳和模型交互效率低下。为了解决这些挑战, 本文提出了一种基于多头DNN的FL算法用于RSRP预测。实验结果表明, 所提出的算法可以增强RSRP预测性能和通信效率。

索引词: 无线通信, RSRP预测, 联邦学习, 6G网络。

主要重點整理

- **研究背景：**本研究聚焦於在即將來臨的6G無線通信中，如何準確預測接收信號強度指標（RSRP），以提升用戶體驗並優化網絡效率。
- **方法論：**提出了一種基於多頭深度神經網絡（Multi-head DNN）的聯邦學習（Federated Learning）算法，解決了用戶設備環境的異質性及通信帶寬的限制，從而提高RSRP預測的性能和通信效率。
- **實驗結果：**實驗顯示，所提出的多頭聯邦學習算法在降低全局測試損失和通信成本方面，較傳統的聯邦平均算法（FedAVG）有顯著改進，具體數據顯示可減少測試損失38.6%和通信成本62.7%。
- **結論與未來工作：**研究表明，利用AI技術進行RSRP預測在6G網絡中至關重要，未來將進一步探索更多複雜模型及不同數據集的應用，以增強算法的性能和效果。

Fig. 1 | Genome characterization of 2019-nCoV. a, Next-generation sequencing of BALF from patient ICU06. b, Genomic organization of 2019-nCoV WIV04. M, membrane. c, Similarity plot based on the full-length genome sequence of 2019-nCoV WIV04. Full-length genome sequences of SARS-CoV BJ01, bat SARSr-CoV WIV1, bat coronavirus RaTG13 and ZC45 were used as reference sequences. d, Phylogenetic tree based on

hepatitis virus; PEDV, porcine epidemic diarrhoea virus; TGEV, porcine transmissible gastroenteritis virus. The scale bars represent 0.1 substitutions per nucleotide position. Descriptions of the settings and software that was used are included in the Methods.

WIV07) (GISAID accession numbers EPI_ISL_402127–402130) that were more than 99.9% identical to each other were subsequently obtained from four additional patients using next-generation sequencing and PCR (Extended Data Table 2).

The virus genome consists of six major open-reading frames (ORFs) that are common to coronaviruses and a number of other accessory genes (Fig. 1b). Further analysis indicates that some of the 2019-nCoV genes shared less than 80% nucleotide sequence identity to SARS-CoV. However, the amino acid sequences of the seven conserved replicase domains in ORF1ab that were used for CoV species classification were 94.4% identical between 2019-nCoV and SARS-CoV, suggesting that the two viruses belong to the same species, SARSr-CoV.

We then found that a short region of RNA-dependent RNA polymerase (RdRp) from a bat coronavirus (BatCoV RaTG13)—which was previously detected in *Rhinolophus affinis* from Yunnan province—showed high sequence identity to 2019-nCoV. We carried out full-length sequencing on this RNA sample (GISAID accession number EPI_ISL_402130). Similar analysis showed that 2019-nCoV was highly similar through

identity to all previously described SARSr-CoVs, except for a 93.1% nucleotide identity to RaTG13 (Extended Data Table 3). The S genes of 2019-nCoV and RaTG13 are longer than other SARSr-CoVs. The major differences in the sequence of the S gene of 2019-nCoV are the three short insertions in the N-terminal domain as well as changes in four out of five of the key residues in the receptor-binding motif compared with the sequence of SARS-CoV (Extended Data Fig. 3). Whether the insertions in the N-terminal domain of the S protein of 2019-nCoV confer sialic-acid-binding activity as it does in MERS-CoV needs to be further studied. The close phylogenetic relationship to RaTG13 provides evidence that 2019-nCoV may have originated in bats.

We rapidly developed a qPCR-based detection method on the basis of the sequence of the receptor-binding domain of the S gene, which was the most variable region of the genome (Fig. 1c). Our data show that the primers could differentiate 2019-nCoV from all other human coronaviruses including bat SARSr-CoV WIV1, which shares 95% identity with SARS-CoV (Extended Data Fig. 4a, b). Of the samples obtained from

1_選取想要引用的PDF 文字段落

RdRp and spike (S) showed that—for all sequences—RaTG13 is the closest relative of 2019-nCoV and they form a distinct lineage from other SARSr-CoVs (Fig. 1d and Extended Data Fig. 2). The receptor-binding spike protein encoded by the S gene was highly divergent from other CoVs (Extended Data Fig. 2), with less than 75% nucleotide sequence

sampling, as assessed could no longer detect sbs and blood samples sampling (Fig. 2a). How including the RdRp or envelope (E) genes are used for the routine detection of 2019-nCoV. On the basis of these findings, we propose that the disease could be transmitted by airborne transmission, although we cannot rule out other possible routes of transmission, as further investigation, including more patients, is required.

Taxus chinensis (Pilg.) Rehder fruit attenuates aging behaviors and neuroinflammation by inhibiting microglia activation via TLR4/NF-κB/NLRP3 pathway

C. Meimei, Z. Fei, X. Wen, L. Huangwei, H. Zhenqiang, Y. Rongjun, et al.

J Ethnopharmacol 2025 Vol. 337 Issue Pt 3 Pages 118943

Accession Number: 39413938 DOI: 10.1016/j.jep.2024.118943

<https://www.sciencedirect.com/science/article/abs/pii/S037887412401242X?via%3Dihub>

ETHNOPHARMACOLOGICAL RELEVANCE: As one of the important by-products of *Taxus chinensis* (Pilg.) Rehder, its fruit (TCF) has a sweet taste, which is commonly used in folklore to make health care wine reputed for enhancing immune function and promoting anti-aging effects, especially popular in the longevity villages of China for a long history. Evidences had showed that *Taxus chinensis* fruit contained polysaccharides, flavonoids, amino acids and terpenoids, which all were free of toxic compounds, but its medicinal value has not been fully recognized. Our previous studies have found that TCF extract may reverse many biological events, including oxidative stress, inflammatory response, neuronal apoptosis, etc. by in silico methods, suggesting potential avenues for future pharmaceutical exploration in aging and age-related diseases. AIM OF THE STUDY: Yet, the anti-aging properties of TCF have not been specifically studied, this study aims to fill this gap by investigating the effects of TCF extract (TCFE) in an aging mouse model, particularly focusing on its role in inhibiting microglial activation and elucidating its underlying anti-aging mechanisms. MATERIALS AND METHODS: An aging mouse model was induced

Abstract

Since the outbreak of severe acute respiratory syndrome (SARS) 18 years ago, a large number of SARS-related coronaviruses (SARSr-CoVs) have been discovered in their natural reservoir host, bats(1-4). Previous studies have shown that some bat SARSr-CoVs have the potential to infect humans(5-7). Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The epidemic, which started on 12 December 2019, had caused 2,794...

Abstract

Background: Artificial intelligence technologies are one of the most important technologies of today. Developments in artificial intelligence technologies have widespread and increased the use of artificial intelligence in many areas. The field of health is also one of the areas where artificial intelligence technologies are widely used. For this reason, it is considered important that healthcare professionals be prepared for artificial intelligence and do not experience problems while training them. In this study, midwife and nurse candidates, as future healthcare professionals, were discussed. Aim: This study aims to examine the effect of the artificial intelligence readiness on the artificial intelligence anxiety and the effect of artificial intelligence characteristic variables (artificial intelligence knowledge, daily life, occupational threat, artificial intelligence trust) on the medical artificial intelligence readiness and artificial intelligence anxiety of students. Methods: This study was planned and carried out as a relational survey study, which is a quantitative research. A total of 480 students, consisting of 240 nursing and 240 midwifery students, were included in this study. SPSS 26.0 and

張仁杰, 2024 #12 Summary Edit PDF

探索人工智慧素養、情感、擬人化如何影響用戶對人工智慧工具的使用意圖之研究：以ChatGPT為例

張仁杰

企業管理學系碩士班

2024

Pages 95

Links

<https://hdl.handle.net/11296/zxtk69>

Abstract

近年來，伴隨著ChatGPT的問世以及人工智慧科技的快速發展，有許多企業紛紛導入人工智慧工具用以解決商業問題，在我們的生活中也出現眾多的人工智慧產品。許多的公司及研發者想要搭上這波人工智慧浪潮，開發出各領域的人工智慧產品，期盼能受到用戶青睞。然而，要讓陌生用戶願意使用新科技、新產品絕非易事。本研究以用戶角度切入，探索使用者對於人工智慧工具之意識、用法、評估、倫理等能力，而這些能力統稱為「人工智慧素養」，除此之外，人工智慧工具之擬人化、情感是否會影響使用者對其之態度，進而影響使用者之使用意圖，皆為本研究之研究問題。本文旨在探討人工智慧素養、情感、擬人化是如何影響用戶對人工智慧工具的使用意圖的。本研究以ChatGPT為基礎，以線上問卷蒐集資料方式進行實證研究，共回收470份問卷。研究結果顯示人工智慧素養用法、人工智慧素養評估、擬人化、情感會正向影響使用者對人工智慧工具之績效預期、努力期望；而績效預期、努力期望、擬人化會影響使用者對人工智慧工具的態度，且態度最終會影響使用者對人工智慧工具之使用意圖，研究結果可供產品開發者及企業管理者作為參考。

In recent years, with the advent of ChatGPT and the rapid development of artificial intelligence (AI) technology, many companies have embraced AI tools to address business challenges. Consequently,

 Ahmed, 2021 #16 Summary Edit PDF

Artificial Intelligence Techniques: Analysis, Application, and Outcome in Dentistry-A Systematic Review

Ahmed, N., Abbasi, M.S., Zuberi, F., Qamar, W., Halim, M.S.B., Maqsood, A. & Alam, M.K.

Biomed Res Int
2021
Pages 9751564

DOI: 10.1155/2021/9751564

Abstract

OBJECTIVE: The objective of this systematic review was to investigate the quality and outcome of studies into artificial intelligence techniques, analysis, and effect in dentistry. **MATERIALS AND METHODS:** Using the MeSH keywords: artificial intelligence (AI), dentistry, AI in dentistry, neural networks and dentistry, machine learning, AI dental imaging, and AI treatment recommendations and dentistry. Two investigators performed an electronic search in 5 databases: PubMed/MEDLINE (National Library of Medicine), Scopus (Elsevier), ScienceDirect databases (Elsevier), Web of Science (Clarivate Analytics), and the Cochrane Collaboration (Wiley). The English language articles reporting on AI in different dental specialties were screened for eligibility. Thirty-two full-text articles were selected and systematically analyzed according to a predefined inclusion criterion. These articles were analyzed as per a specific research question, and the relevant data based on article general characteristics, study and control groups, assessment methods, outcomes, and quality assessment were extracted. **RESULTS:** The initial search identified 175 articles related to AI in dentistry based on the title and abstracts. The full text of 38 articles was assessed for eligibility to exclude studies not fulfilling the inclusion criteria. Six articles not related

Abstract

- Background The common cold is an upper respiratory tract infection, most commonly caused by a rhinovirus. It affects people of all age groups and although in most cases it is self limiting, the common cold still causes significant morbidity. Antihistamines are commonly offered over the counter to relieve symptoms for patients affected by the common cold, however there is not much evidence of their efficacy.

Objectives To assess the effects of antihistamines on the common cold.

Search methods We searched CENTRAL (2015, Issue 6), MEDLINE (1948 to July week 4, 2015), EMBASE (2010 to August 2015), CINAHL (1981 to August 2015), LILACS (1982 to August 2015) and Biosis Previews (1985 to August 2015). Selection criteria We selected randomised controlled trials (RCTs) using antihistamines as monotherapy for the common cold. We excluded any studies with combination therapy or using antihistamines in patients with an allergic component in their illness. Data collection and analysis Two authors independently assessed trial quality and extracted data. We collected adverse effects information from the included trials. Main results We included 18 RCTs, which were reported in 17 publications (one publication reports on two trials) with 4342

王田苗, 2014 #26 Summary Edit PDF

我國工業機器人技術現狀與產業化發展戰略

王田苗 & 陶永

機械工程學報
2014
Issue 09 Pages 1-13

Abstract

隨著工業機器人的快速發展,其在汽車制造、機械加工、焊接、上下料、磨削拋光、搬運碼垛、裝配、噴塗等作業中得到越來越多的應用。結合在機器人領域的相關工作,在分析國內外關於工業機器人發展現狀的基礎上,就工業機器人目前涉及的靈巧操作、自主導航、環境感知、人機交互與安全性等前沿技術的研究做簡要的綜述。提出我國工業機器人產業發展的若干思考和建議,希望能夠在把握國內外工業機器人前沿技術發展動態的同時,為發展我國工業機器人技術與產業提供相關戰略思考與建議。

Abstract
Background Vaccines are needed to prevent coronavirus disease 2019 (Covid-19) and to protect persons who are at high risk for complications. The mRNA-1273 vaccine is a lipid nanoparticle-encapsulated mRNA-based vaccine that encodes the prefusion stabilized full-length spike protein of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), the virus that causes Covid-19. Methods This phase 3...

Chatbots for future docs: exploring medical students' attitudes and knowledge towards artificial intelligence and medical chatbots

Julia-Astrid Moldt , Teresa Festl-Wietek , Amir Madany Mamlouk , Kay Nieselt , Wolfgang Fuhl and Anne Herrmann-Werner

^aUniversity of Tuebingen, Tuebingen, Germany; ^bInstitute for Neuro- and Bioinformatics, University of Luebeck, Luebeck, Germany; ^cInstitute for Bioinformatics and Medical Informatics, University of Tuebingen, Germany; ^dDepartment of Internal Medicine V Psychosomatic Medicine and Psychotherapy, University Hospital Tuebingen, Tuebingen, Germany

ABSTRACT

Artificial intelligence (AI) in medicine and digital assistance systems such as chatbots will play an increasingly important role in future doctor – patient communication. To benefit from the potential of this technical innovation and ensure optimal patient care, future physicians should be equipped with the appropriate skills. Accordingly, a suitable place for the management and adaptation of digital assistance systems must be found in the medical education curriculum. To determine the existing levels of knowledge of medical students about AI chatbots in particular in the healthcare setting, this study surveyed medical students of the University of Luebeck and the University Hospital of Tuebingen. Using standardized quantitative questionnaires and qualitative analysis of group discussions, the attitudes of medical students toward AI and chatbots in medicine were investigated. From this, relevant requirements for the future integration of AI into the medical curriculum could be identified. The aim was to establish a basic understanding of the opportunities, limitations, and risks, as well as potential areas of application of the technology. The participants (N = 12) were able to develop an understanding of how AI and chatbots will affect their future daily work. Although basic attitudes toward the use of AI were positive, the students also expressed concerns. There were high levels of agreement regarding the use of AI in administrative settings (83.3%) and research with health-related data (91.7%). However, participants expressed concerns that data protection may be insufficiently guaranteed (33.3%) and that they might be increasingly monitored at work in the future (58.3%). The evaluations indicated that future physicians want to engage more intensively with AI in medicine. In view of future developments, AI and data competencies should be taught in a structured way during the medical curriculum and integrated into curricular teaching.

Medical students; artificial intelligence; applications in education; human-computer interface; teaching/learning strategies; chatbot

Introduction

The healthcare system is undergoing a digital transformation, and artificial intelligence (AI) will play a significant role in defining everyday medical practice [1]. The location- and time-independence of digital applications have created new opportunities for medicine and health communication that are also changing the doctor – patient relationship [2]. The growing importance of e-health applications, wearables and AI applications such as chatbots can empower patients to collect their own health data [3,4].

Furthermore, the digital networking of patients, hospitals, physicians and other healthcare services is enabling a shift from a physician-centric approach to more patient-centered treatment [5]. To exploit the potential of this technical innovation and ensure optimized care for patients, future doctors must be equipped with the appropriate skills [6]. Future physicians will not only need to be flexible in responding to different healthcare contexts but will also require

the competence to adequately deal with procedures and applications involving AI and the accompanying big data [7]. The growing complexity of medicine and increasing specialization of knowledge require the integration of AI as well as the interaction with digital assistance systems already in the curriculum of medical studies [8–10]. According to current literature, although AI competencies are essential for medical practice, they are not comprehensively taught in medical education [7,11,12].

Medical curriculum in Germany

A look at the national competence-based learning objectives catalog for medicine (NKLM) [13] shows that the teaching of competencies in the area of medical apps and artificial intelligence is still under-represented. The national competence-based learning objectives catalog for medicine is currently being further developed on the basis of the 'Master Plan

Zhu, 2015 #34 Summary Edit PDF

technique known as direct ink writing. The 3D printed graphene aerogels are lightweight, highly conductive and exhibit supercompressibility (up to 90% compressive strain). Moreover, the Young's moduli of the 3D printed graphene aerogels show an order of magnitude improvement over bulk graphene materials with comparable geometric density and possess large surface areas. Adapting the 3D printing technique to graphene aerogels realizes the possibility of fabricating a myriad of complex aerogel architectures for a broad range of applications.

Highly compressible 3D periodic graphene aerogel microlattices

Cheng Zhu¹, T. Yong-Jin Han¹, Eric B. Duoss¹, Alexandra M. Golobic¹, Joshua D. Kuntz¹, Christopher M. Spadaccini¹ & Marcus A. Worsley¹

Graphene is a two-dimensional material that offers a unique combination of low density, exceptional mechanical properties, large surface area and excellent electrical conductivity. Recent progress has produced bulk 3D assemblies of graphene, such as graphene aerogels, but they possess purely stochastic porous networks, which limit their performance compared with the potential of an engineered architecture. Here we report the fabrication of periodic graphene aerogel microlattices, possessing an engineered architecture via a 3D printing technique known as direct ink writing. The 3D printed graphene aerogels are lightweight, highly conductive and exhibit supercompressibility (up to 90% compressive strain). Moreover, the Young's moduli of the 3D printed graphene aerogels show an order of magnitude improvement over bulk graphene materials with comparable geometric density and possess large surface areas. Adapting the 3D printing technique to graphene aerogels realizes the possibility of fabricating a myriad of complex aerogel architectures for a broad range of applications.

Abstract

- Background Garlic is alleged to have antimicrobial and antiviral properties that relieve the common cold, among other beneficial effects. There is widespread usage of garlic supplements. The common cold is associated with significant morbidity and economic consequences. On average, children have six to eight colds per year and adults have two to four. Objectives To determine whether garlic (Allium sativum) is effective for the prevention or treatment of the common cold, when compared to placebo, no treatment or other treatments. Search methods We searched CENTRAL (2014, Issue 7), OLDMEDLINE (1950 to 1965), MEDLINE (January 1966 to July week 5, 2014), EMBASE (1974 to August 2014) and AMED (1985 to August 2014). Selection criteria Randomised controlled trials of common cold prevention and treatment comparing garlic with placebo, no treatment or standard treatment. Data collection

Abstract

EndNote 2025推出了旨在優化研究和寫作過程的全新工具，以協助研究人員輕鬆應對耗時任務，更快達成研究目標。新版解決方案的發佈標榜著人工智慧功能首次內建到EndNote。30多年來，研究人員始終依賴EndNote簡化其研究和寫作過程。隨著EndNote 2025的推出，更先進的文獻管理工具嶄新問世，一系列高階人工智慧功能也包含其中，這些工具將進一步提升管理性任務的效率，讓研究人員能夠專注於自己的科研構想。EndNote 2025是值得信賴的解決方案，能說明使用者保證論文質量和準確性，還能讓研究和寫作過程的各個階段更加高效省時、井然有序。

Abstract

Since the outbreak of severe acute respiratory syndrome (SARS) 18 years ago, a large number of SARS-related coronaviruses (SARSr-CoVs) have been discovered in their natural reservoir host, bats(1-4). Previous studies have shown that some bat SARSr-CoVs have the potential to infect humans(5-7). Here we report the identification and characterization of a new coronavirus (2019-nCoV), which caused an epidemic of acute respiratory syndrome in humans in Wuhan, China. The

Abstract

Acute kidney injury (AKI) is one of the most severe complications of SARS-CoV-2 infection. In a retrospective study, we aimed to describe the influence of COVID-19-related factors on the severity, outcome and timing of AKI in 268 patients admitted in two large COVID-19-designated university hospitals over a period of 6 months. In the univariate analysis, there was a significant relationship between KDIGO stage and the extension of COVID-19 pneumonia on computed tomography (CT), need for oxygen supplementation, serum levels of ferritin,

Abstract

Published evidence supports significant heterogeneity of immune responses among individuals infected with or vaccinated against SARS-CoV-2. This highlights the need for in-depth investigation of the implicated processes toward refined understanding and improved management of COVID-19. The main objective of the present study was to investigate the dynamics of B cell

Abstract

Background: Artificial intelligence technologies are one of the most important technologies of today. Developments in artificial intelligence technologies have widespread and increased the use of artificial intelligence in many areas. The field of health is also one of the areas where artificial intelligence technologies are widely used. For this reason, it is considered important that healthcare professionals be prepared for artificial intelligence and do not experience problems while training them. In this study, midwife and nurse candidates, as

Abstract

- Background The common cold is a spontaneously remitting infection of the upper respiratory tract, characterised by a runny nose, nasal congestion, sneezing, cough, malaise, sore throat, and fever (usually < 37.8 °C). Whilst the common cold is generally not harmful, it is a cause of economic burden due to school and work absenteeism. In the United States, economic loss due to the common cold is estimated at more than USD 40 billion per year, including an estimate of 70 million workdays missed by employees, 189 million school days missed by children, and 126 million workdays missed by parents caring for children with a cold. Additionally, data from Europe show that the total cost per episode may be up to EUR 1102. There is also a large expenditure due to

The screenshot displays a reference management application window titled "EN Demo.enl". The interface includes a menu bar (File, Edit, References, Groups, Tags, Library, Tools, Window, Help) and a sidebar on the left with sections for "Library Status", "MY GROUPS", and "MY TAGS". The "Year" group is selected, and a context menu is open over it, listing options such as "Create Group", "Create Smart Group...", "Create From Groups...", "Create Group Set", "Rename Group Set", "Delete Group Set", and "Open in New Tab".

The main area shows a list of 46 references. The selected reference is:

Year	Author	Title	Journal
2025	Uriu, K.; Okumura, K., Uwamino, Y., Chen, L., Tolentino, J.E., Asakura, H., Nagashima, M., Sadamasu, K., Yoshimura, K., Ito, J., Sato, K. & Genotype to Phenotype Japan, C.	Virological characteristics of the SARS-CoV-2 NB.1.8.1 variant	Lancet Infect Dis 2025

The right-hand pane displays the details for the selected reference, including the title "Virological characteristics of the SARS-CoV-2 NB.1.8.1 variant", authors, journal information, PMID (40489985), DOI (10.1016/S1473-3099(25)00356-1), and a link to the full text on Web of Science. Below this, there are sections for "Links", "File Attachments" (with an "Attach file" button), and "Groups" (listing "Coronavirus", "SARS", and "Year").

How you breathe is like a fingerprint that can identify you

by Humberto Basilio

Making a breath

Breathing is deeply connected to the brain. Every inhalation and exhalation is coordinated to supply the oxygen needed for the brain to manage the body's systems¹⁻⁴.

To test this, the researchers developed a custom, wearable device that records airflow through each of a person's nostrils^{5,6}.
