Diaphragmatic Hernia Causing Lung Collapse

Muhammad Yasin, M.D.
James C. Reed, M.D.
University of Louisville
Louisville, KY
dryasinmd@gmail.com

A 54-YEAR-OLD MAN WITH A HISTORY OF CHRONIC obstructive pulmonary disease presented with acute respiratory distress and productive cough. Physical examination revealed hyperinflation, decreased right hemithorax expansion, and right hemithorax with audible bowel sounds. The patient showed near-complete opacification of the right lung on the right that extended to the level of the aortic arch. Computed tomography of the chest performed approximately 3 months before presentation confirmed the presence of a right anteromedial diaphragmatic hernia. The right lung was completely collapsed with a defect in the diaphragm that measured 4.5 cm. The hernia was a large volume of abdominal bowel containing the majority of the right colon, the appendix, multiple loops of small intestine, and omentum. The right lung was completely collapsed (arrows). There was only a finding that was consistent with the high degree of lung collapse and that was probably related to proximal bronchial obstruction. The hernia was most likely congenital in origin and can increase in size with the wishes of the patient and his family.

“Teleswallowing”: a case study of remote swallowing assessment

Accepted 31 July 2015

Abstract

Purpose – Telemedicine has enabled speech and language therapists (SLTs) to remotely assess swallowing difficulties (dysphagia) experienced by nursing home residents. The new technique, “teleswallowing”, was designed by the Speech and Language Therapy Service at Blackpool Teaching Hospitals NHS Foundation Trust. It allows prompt assessment, avoiding potential risks of aspiration pneumonia, malnutrition, poor rehabilitation, increased hospital stays and reduced quality of life (Hinchee *et al.*, 2005; Langmore *et al.*, 1998). The purpose of this paper is to report on a second pilot of teleswallowing and the concomitant adoption study.

Design/methodology/approach – The adoption study employed qualitative methods, including consultations with senior managers, semi-structured interviews with nursing home matrons/managers and nurses, two focus groups and semi-structured interviews with SLTs. The project clinical lead kept an activity log, which was used to estimate resource savings.

Findings – Over a three-month period, six SLTs and 17 patients in five nursing homes participated in teleswallowing assessments. Teleswallowing benefited both patients and participating nursing homes. Better use of therapist time and cost savings were demonstrated and evidence showed that the service could be successfully scaled up. Despite this, a number of barriers to service transformation were identified.

Originality/value – This is the first implementation of teleswallowing in the UK, but it has been used in Australia (Ward *et al.*, 2012). The approach to engaging stakeholders to understand and address barriers to adoption is novel. The value lies in the lessons learned for future innovations.

Keywords Telemedicine, Qualitative research, Dysphagia, Nursing homes, Digital health adoption, Remote assessment

Paper type Case study

Introduction

Blackpool Teaching Hospitals NHS Foundation Trust provides acute and community services in speech and language therapy. Speech and language therapists (SLTs) undertake assessment of patients with swallowing difficulties (dysphagia). A key problem is responding quickly to calls to assess, which conventionally requires a visit by a SLT as assessments can sometimes be delayed significantly due to service pressures. The impact of this includes increased emergency admissions, poor rehabilitation, progression to aspiration pneumonia and other problems. (Hinchee *et al.*, 2005; Langmore *et al.*, 1998; Ward *et al.*, 2012).

Teleswallowing was funded by an award from the NHS England Regional Innovation Fund (RIF). Investment in equipment and for the clinical lead was funded by Blackpool Teaching Hospitals NHS Foundation Trust and the North West NHS Shared Infrastructure Service, who also funded the earlier pilot study.

全文 翻譯 | 開啟檢索術語導覽

Aggression during psychiatric hospitalisation is frequent, problematic, and a major challenge for nurses and mental health services more generally. An important protective factor that can limit the likelihood of aggression is the strength of the therapeutic alliance between nursing staff and consumers.

The continuing need to focus on good communication and teamwork are also integral to contemporary management of aggressive behaviour (Emmerson et al. 2007). The Safewards program, designed by Professor Len Bowers, Kings College London, offers the opportunity to reduce the frequency of these risks and harmful events resulting with keeping consumers and staff safer (Bowers et al. 2015). This is obtained by reducing the conflict originating factors and finding alternative ways to manage them to prevent flashpoints from arising.

The aim of the research at Metro North Mental Health in Queensland was to introduce the structured Safewards program of 10 mental health nursing interventions in order to understand their impact compared with the traditional approach of **nursing assessment** and management of aggression. Ethics approval was granted to conduct the current study on general inpatient psychiatric wards of RBWH, TPCH and Ipswich Hospitals. Safewards has not previously been studied in specialised units and we are currently extending this to Secure Mental Health Rehabilitation Units.

The 10 interventions were implemented over a six month period between October 2015 and March 2016. The evaluation has three recognised components, process, impact and outcome. Throughout the project, data has been collected on the number of staff receiving education support; hours of supervision provided

1

 Resident lift slings: A silent risk?

Fiolo, Mark. **Nursing Homes** 56.6 (Jun 2007): 47-48.
USA - Discusses the risk of injury due to worn patient lift slings. Describes the responsibility of facilities to inspect slings and belts before every use and to remove them after a certain age even if there are no visible signs of wear. Explores factors that influence the "life expectancy" of slings.

2

 FDA bed safety guidance: Mitigating risk

Braun, Julie A. **Nursing Homes** 55.5 (May 2006): 36-41.
USA - Describes the Food and Drug Administration's (FDA) guidelines for bed safety. Addresses the components to consider when developing an entrapment-prevention protocol. Identifies the need to assess a patient's need for bedrails and examines caregiver ratios and training as well as equipment age and condition. Describes critical entrapment test zones in bed systems and tests designed to measure gaps where a resident could become trapped.

基本檢索
檢索 > 基本檢索
檢索學科領域

輸入一或多個字詞，然後按一下 [檢索]。
接著就可觀察您的檢索結果。開啟及檢視您關注的文件。文件可能是任何資料，包括報紙文章、相片、PDF 或視訊等。

須知事項
ProQuest 如何處理您輸入的字詞：
ProQuest 會在所有選定資料庫中所有文件的所有欄位中尋找您的字詞 (檢索術語)，包括任何可用的摘要或全文。
當輸入一個以上的字詞 (例如 shale oil) 時，ProQuest 會在任何欄位中尋找同時包含 shale 和 oil 的文件，包括任何可用的摘要或全文。

檢索確切的片語
使用引號括住您的字詞 - "eternal love" 或 "life after death" - 強制 ProQuest 將您的字詞只當成一個片語尋找，而不是分開尋找每個字詞。

查看您正在檢索哪些資料庫
您目前正在檢索哪些資料庫的相關資訊會在 ProQuest 視窗上方的藍色列中顯示。以下是顯示情形的範例：
您正在檢索：04 個資料庫 (請參閱左邊「欄位」)

根據預設，我們會尋找具有所有已輸入術語的文件。
使用 "引號" 檢索確切片語。
使用 OR 分隔術語可尋找任一已輸入的字詞。

More about Nursing & Allied Health Database

These are the main features and content:

Ongoing full-text access to high impact nursing journals and elite medical publications

Ongoing full-text access to high impact nursing publications including *Journal of Nursing Scholarship*, *Journal of Emergency Nursing*, and *Nursing Standard* (since April 2016). Core nursing journal coverage is augmented with elite medical publications such as *The New England Journal of Medicine* and *The Lancet* and is easily linked to other required content. Compared to other providers, ProQuest has shorter embargoes and more full-text content.

Diverse content aligned with student, instructor, and researcher needs

Supports end user need for diverse content with thousands of full-text dissertations unique to ProQuest covering many areas including nursing, mental health, public health, and topics related to the delivery of patient care.

ProQuest amasses summary journals, conference proceedings, trade journals, books, and more into a single cross-searchable collection. These primary, secondary, and tertiary content sources cover the spectrum of nursing scholarship and give all users from undergraduates and faculty to clinicians and practitioners easy access to relevant content.

Best practice/epidemiology

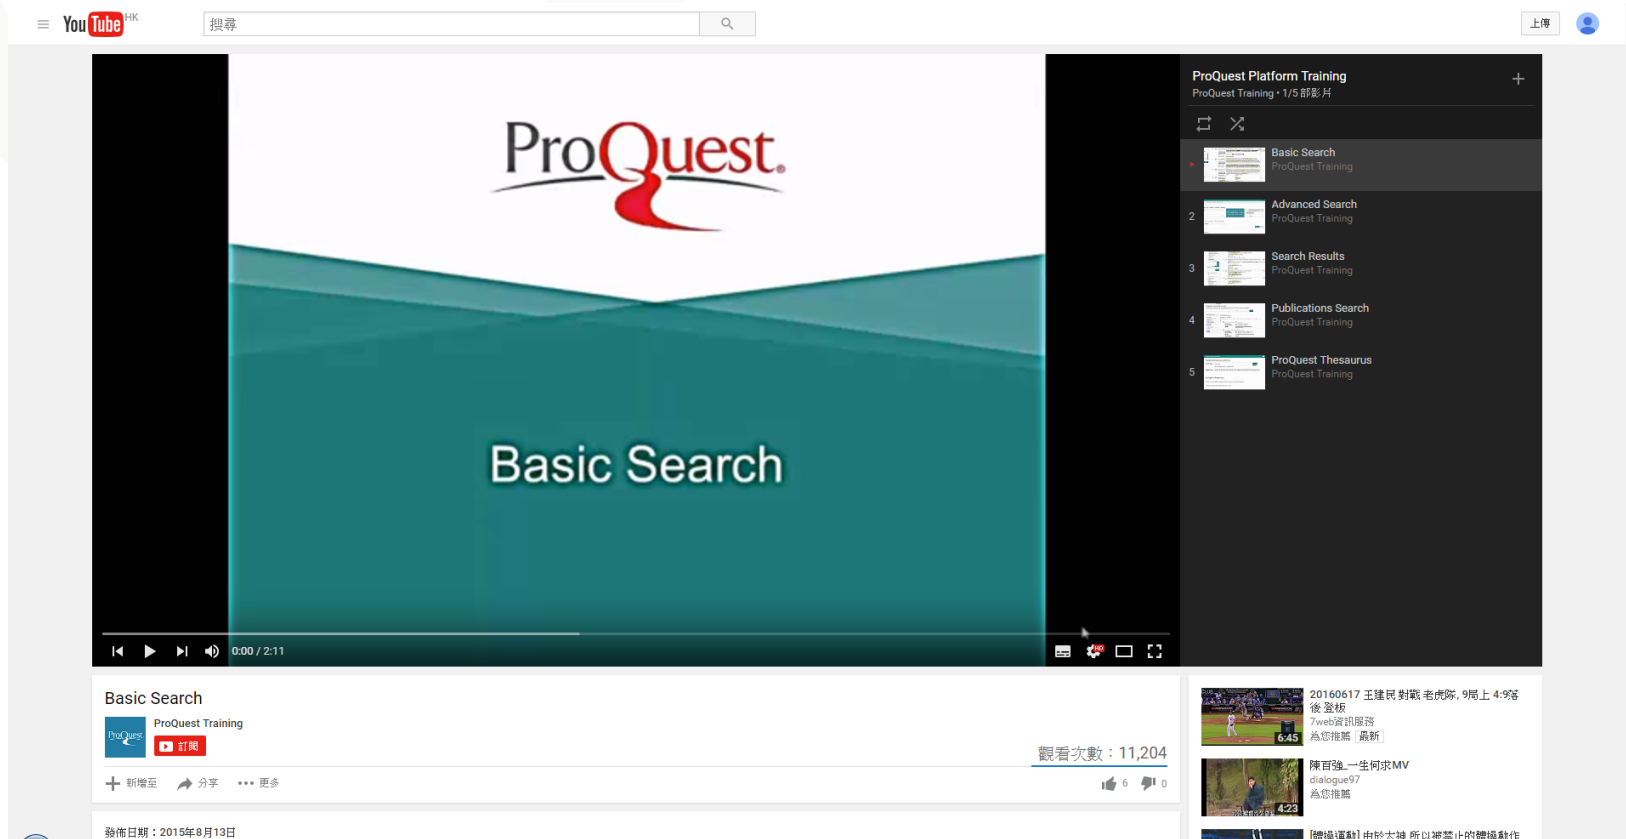

Access to evidence-based resources is as important as ever, which is why ProQuest includes

Publication Types

- Books
- Dissertations & theses
